

David and his Soapbox

Description

Well, it's that time of the week again. I am once again bored outta my mind at work, and trying in vain to think of something to do.

Therefore, I have decided to try something a little different with this blog post (taken from the page of the oh-so-glorious TheParkBench, [TheParkBench](#)) and celebrate the nerdy way of life.

First off, the news:

“ [Uranium found on the Moon](#)

Uranium was found on the moon. Yeah, exactly.

According to the article, a Japanese probe has identified Uranium particles on the surface of the Moon. The article states that this could potentially pave the way for future settlements on the moon. And yet, all I could think of was something from the great nerd TV show, Futurama. That if this does happen, all that will result is a campy Disneyland on the surface of the moon.

Which reminds me, I should get a Fun-gineering degree.

“ Kari Byron, the fantastically gorgeous member of Mythbusters (in actuality, the only girl on the show), has given birth! She gave birth to, according to a Tweet from Grant Imahara (one of her two cohorts in the busting of myths and @grantimahara on Twitter), that “Stella Ruby born 11:35pm 6/28/09, 42 hours of labor, weight: 8lbs 12oz. Both Kari & baby in good health.”

“ I have been saying it for as long as I can remember, and it pains me to say this, but over 800 unique and wonderful species have gone extinct within the last 500 years. And the worst part is, according to a report by the IUCN (International Union on Conservation of Nature), that over 5,000 species are now at risk!

According to the report, “The new analysis shows 869 species became extinct or extinct in the wild since the year 1500 while 290 more species are considered critically endangered and possibly extinct. At least 16,928 species are threatened with extinction, including nearly one-third of amphibians, more than one in eight birds and nearly a quarter of mammals.”

[Over 800 Species Extinct!](#)

Seriously people. Something must be done. If we loose our wondrous biodiversity now, it will be gone forever. Forever is such a scary word, but aptly fits this scenario.

Well, turns out my MRP is increasing in relevance every single day. First newspaper coverage on Black-Footed Ferrets (which I will be visiting at the end of August to film), 2010 being named the official year of Biodiversity (WOO!) and now a report by the IUCN declaring over 5,000 species at risk of extinction.

And now, to end this small rant, three final words:

SAVE THE SPECIES!

And now, because I really should not end a blog post on a slightly sad note, here is an article that is funny, and yet, disturbing simultaneously. Check it out, it's very telling about advertising and the media that was represented at the time.
